

SILK WAISTS

Twenty-seven Waists are included in this lot. Some of them, were originally \$7.00 each. Most of them, though, were \$5.00 and \$6.00. They all go in at one price, - - - - - **\$3.98**

Then we have one lot of Black Taffeta and Jap Silk Waists that were marked \$5.00. These are to go at - - - - - **\$3.98**

The silk in these Waists is of a beautiful quality Chiffon Taffeta in plain blue, brown, black and fancy plaid. While the quality can't be beat in these Waists, still they are ones we carried over from last season. We haven't the room to carry these with the big line of Winter Waists we are showing, so we take the loss of \$1.00 to \$3.00 to move them quickly.

SALE OF SKIRTS

Twenty-five in blue, black, brown, light grey and dark mixtures. Values up to \$5.00. All for this sale at - - - - - **\$2.50**

Another lot of fifteen Skirts, including Black and Blue Chiffon Panamas and Black Sicilians, in values up to \$10.00. All for this sale at - - - - - **\$5.98**

Most of the above Skirts are excellent in quality and good values at the original prices. In some of them the style may be a little past, but none of them more than one season. At the present prices the material they are made of would cost more.

If you intend to get in on the Dress Goods Sale you'd better not delay, as several of the pieces have already been closed.

GROWING SUGAR-CANE IN TEXAS.

The Lone Star State Ahead of Hawaii in the Production of Sugar.

Sugar-making appears to be one of the destined large industries of this prolific state. The lower valley of the Rio Grande, for a distance of 100 miles inland from the gulf, is said by sugar-cane experts to be the most favorable spot in the United States for the cultivation of that plant. Owing to its extreme southern latitude, 400 miles south of the Louisiana cane-fields, the crop may develop fully without danger of frost. Planters in the lower Rio Grande valley give their cane a full twelve months to mature, against eight or ten in Louisiana, where frost is always a menace latter than October. The combined richness of the Texas soil, unequalled even in Cuba, and favorable climatic conditions, place the yield of this region above that of Hawaii. A planting of cane "joins" will yield in Texas profitably for eight years, against three years, at the extreme, in other cane-growing sections of the United States.

Texas has great plans for coming into the sugar market of the United States, and coming in strong. Great plantation companies are being organized, and the most extensive irrigation works on this continent are under process of construction in the Rio Grande valley. Refineries are springing up there, and the companies building them are offering every inducement and assistance to industrial men of small means to come in and begin producing cane. The poor man's chance lies down there today on the Texas frontier.—G. W. Ogden in the November Everybody's.

They Came in.

Willie came to school for the first time. In one hand he carried a cap and in the other a bunch of bananas.

"You can't come in here with those bananas," said the teacher.

Willie went out. In a few minutes he came back, wailing slowly and painfully.

"Where did you put the bananas?" asked the teacher. "I hid them all right," gasped Willie; "they're safe inside of me."—Philadelphia Ledger.
